

ABSTRACT OF THE DISCLOSURE

5 A therapeutic sling seat comprising a flexible material which is non-uniform in
stiffness providing maximum contact surface area with the body of a person seated
in the seat by spreading the forces away from high pressure areas using multiaxis
tension forces. The seat material in tension adapts to the contour of the posterior of
the seated person. By controlling the pressures on the ischial tuberosities, physical
10 problems such as ulcers can be avoided.
